

Delivery of a safe can be a complicated and difficult process. We offer a trained professional delivery crew as well as expensive safe moving equipment. Even with the proper training and equipment, the safes don't flex, so we need the proper amount of space to allow our equipment to work. This is to assure a safe delivery with no damage to your new safe, home, or our delivery crew.

We work hard at keeping our delivery costs as low as possible. This makes buying a safe easier and more affordable.

To keep our price down, the following information will be helpful to determine the possibilities of your safe delivery.

In all cases we are as careful as possible!

.....

Delivery and Placement

Garage Drop

Garage drop consist of bringing your safe to your garage boxed and on the pallet. A one man job - drop off only.

Safe Placement

The word placement, from this point, means: unboxing the safe, setting it in the desired spot, leveling, and demonstration of proper safe operation.

Garage Placement

The placement of the safe in the garage. No steps and not over the threshold into living area.

In-Home Placement

The placement of the safe any place we can fit it with 3 or less steps.

Step Placement

The placement of the safe any place we can fit it with 13 or less steps.

Installation Parameters

Our well trained installation crew can place your safe flawlessly if the following parameters are met. When all the parameters are not met, installation and placement may still be possible, however we cannot be responsible for damage and/or additional charges may apply.

Doorways must be 1" wider than the safe (including) the handle).

Hallways/Stairways must be 3" wider than the safe.

Upstairs placement needs to have a landing at the bottom of the stairs that is the safe size plus 10" from the wall to the first step. The landing after the top step needs to be the safe size plus 24" from the top stair to the wall.

Downstairs placement needs to have a landing before the top step that is the safe size plus 24" from the top step to the wall. The bottom landing needs to be the safe size plus 10" from the last step to the wall.

Stairway landings need to be the safe size plus 24" from the last step to the wall.

Angled steps on the stairways and landings will greatly affect the size of safe we are able to place in your home.

We will not warranty the following:

- Stairways and landings with angled steps
- Stairways, landings, and doors that are too small
- White or light colored carpets on stairs
- Uncovered wood steps
- If ceramic tile cracks under delivery sheets
- Damage caused when bolting safe to floor.

We do not warranty the structural integrity of your floors, staircases, or steps. If needed, additional supporting of floors, staircases, and steps is the responsibility of the home owner.

.....

Please have an alternate location for any safe that does not meet delivery parameters.

If an alternate location is not an option and the safe is refused (or) A delivery appointment is missed without prior notice, a service fee will be charged.

.....

Large Safes

Safes that are over 60" tall and/or weigh over 1000 pounds may have additions fees involved.
